DATA PRODUCT: Academic Partnership Dashboard

FEATURE: Nursing students placed at Emory Healthcare from Nursing Academic Partners (i.e. Schools of Nursing)

Description and Purpose:

Create an academic partnership dashboard to provide a comprehensive and visual guide to key metrics and outcomes related to academic partnerships. Primary purpose includes performance monitoring, data integration, enhanced collaboration, outcome tracking, strategic planning, stakeholder communication, and impact evaluation of various clinical pipeline programs essential to addressing the nationwide nursing staffing crisis.

Value:

Ability to assess Return on Investment (ROI) in premier nursing partnerships and ensure efficiency and accuracy in reporting of key metrics.

Objective:

- Increase efficiency and accuracy in reporting key performance indicators related to academic partnerships from a manual spreadsheet to an automated dashboard for data integration/visualization, data analysis, reporting, collaboration, and data monitoring.

Data Sources:

- ACEMAPP
- HR (PeopleSoft)
- Vizient Nurse Residency Program
- Applicant Tracking System (ATS) – (ICIMS)
- Georgia Board of Nursing NCLEX Pass Rate Data (PDF file)

User Experience Considerations

Challenges & Opportunities:

- Address potential data integration issues from different data sources.
- Identify data subject matter experts (SMEs) on the data sources being consumed.
- ACEMAPP Data Discovery to identify data elements required.
- The current state for creating reports for senior leadership requires manual abstraction from various sources.
- Provide customizable views to allow different users to tailor the dashboard to their needs.
- Data published at different cycles/times – could create mismatches.
- Amount of scripting/automation of data required.

Dependencies

Interdependencies:

- Integration with multiple systems.
- Coordination with various areas of IT for seamless data flow.
- Collaboration with human resource teams to define dashboard requirements and usability.
- Integration with Talent Acquisition, System Nursing Education, and Human Resources, Advanced Practice Registered Nurse Teams.

Success Measurement for Academic Dashboard

Metrics:

- Automate for data integration/visualization, data analysis, reporting, collaboration, and real-time data monitoring of nurses hired by Emory Healthcare from sponsoring universities (schools of Nursing)
- Number of students enrolled in the program / annually
- Total number of students graduating each year
- Total number of cohorts/year
- Percentage of student placements to Emory Healthcare
- Number of students hired to Emory Healthcare / quarterly and annually
- Percentage of graduating class hired per cohort / quarterly and annually
- Number of student offers to Emory Healthcare for each cohort
- Number of students anticipated to start at Emory Healthcare for each cohort
- Return on investment by program and institution

Academic Nursing Contribution:

- Addresses the nationwide nursing staff crisis as it affects Emory Healthcare
- Increase capacity to assess effectiveness and impact of collaborations through quantifiable ROI data
- Strengthening of clinical workforce pipeline

Delivery Date

Critical Deadlines:

- Number of Nurses hired by Emory Healthcare from Emory School of Nursing and other Premier partners.
- Align with the overarching timelines of the enterprise projects but not classified as hard delivery dates.

Academic Dashboard MVP (Minimum Viable Product):

1) **(MVP)** Number of nurses hired by Emory Healthcare from partnering universities (schools of nursing).
2) **Non-functional requirements:** follow data quality models, align with governance team members, align with team to ensure security alignment with legal.

Acceptance Criteria:

The MVP will be considered done when:

1. An Academic partnership dashboard has been created to provide a comprehensive and visual guide to key metrics and outcomes related to academic partnerships.
2. Thorough testing has validated and verified the accuracy and reliability of the data calculations and correlations.
3. User acceptance testing has been performed and the business stakeholder accepts the output created for the MVP.
4. The MVP will include a data dictionary that captures information about data included in the MVP such as meaning, relationships to other data, origin, usage, and format. Data Dictionary

will provide detailed descriptions of the data elements and serve as a reference for data management and data governance processes.
